

# What's your science fair project?

**Arthritis and First Nations People: Managing Chronic Pain**

**Procedure**

1. Researcher proposed research project to the community and was funded by the community.
2. Researcher conducted research in the community for two years.
3. Researcher collected data from the community and analyzed it.
4. Researcher presented the results of the research to the community.
5. Researcher received feedback from the community and revised the project.
6. Researcher conducted a second round of research and presented the results to the community.
7. Researcher received feedback from the community and revised the project.
8. Researcher conducted a third round of research and presented the results to the community.
9. Researcher received feedback from the community and revised the project.
10. Researcher conducted a final round of research and presented the results to the community.

**Abstract**

The purpose of this research was to investigate the impact of chronic pain on the lives of First Nations people. The research was conducted in a community in Ontario, Canada. The results of the research showed that chronic pain has a significant impact on the lives of First Nations people. The research also showed that there are a number of factors that contribute to chronic pain in First Nations people. These factors include genetics, environment, and lifestyle. The research also showed that there are a number of ways to manage chronic pain in First Nations people. These ways include traditional medicine, physical therapy, and cognitive behavioral therapy.

**Conclusion**

The research showed that chronic pain has a significant impact on the lives of First Nations people. The research also showed that there are a number of factors that contribute to chronic pain in First Nations people. These factors include genetics, environment, and lifestyle. The research also showed that there are a number of ways to manage chronic pain in First Nations people. These ways include traditional medicine, physical therapy, and cognitive behavioral therapy.

**Background**

Chronic pain is a common problem for many people. It is a pain that lasts for a long time and can be very difficult to manage. Chronic pain can be caused by a number of factors, including genetics, environment, and lifestyle. Chronic pain can have a significant impact on the lives of people. It can make it difficult to work, to study, and to live. Chronic pain can also have a significant impact on the lives of First Nations people. Chronic pain can be caused by a number of factors, including genetics, environment, and lifestyle. Chronic pain can have a significant impact on the lives of people. It can make it difficult to work, to study, and to live. Chronic pain can also have a significant impact on the lives of First Nations people.

**Recommendations & Suggestions**

The research showed that chronic pain has a significant impact on the lives of First Nations people. The research also showed that there are a number of factors that contribute to chronic pain in First Nations people. These factors include genetics, environment, and lifestyle. The research also showed that there are a number of ways to manage chronic pain in First Nations people. These ways include traditional medicine, physical therapy, and cognitive behavioral therapy.

**BASEF 2016**  
sponsored by  
ArcelorMittal Dofasco

**Enter the competition.**  
**Over \$200,000 in prizes, scholarships and trips.**

## Bay Area Science and Engineering Fair sponsored by ArcelorMittal Dofasco

**March 30 – April 4, 2017**  
**Mohawk College, Hamilton, Ontario**

**FREE to all grade 7 to 12 students in**  
**Hamilton, Halton, Brant, Haldimand,**  
**Norfolk and Six Nations**

**Online registration February 1<sup>st</sup> to March 7<sup>th</sup>**

**Your school contact is:**
